JEREMIAH SHADAMORO

Software Engineer | FullStack (AI)
jeremiahshadamoro@gmail.com | +2348104261451 | LinkedIn | GitHub

Professional Summary

Software engineer building AI-powered web and mobile applications across PropTech, Fintech, AgriTech, Education, and Government. Core expertise with Python, Typescript, Javascript, and Go. With additional backend development experience using Node.js, FastAPI (AI), and Go (microservices), combined with frontend experience using Next.js, React, and React Native. Experienced in REST APIs, authentication, payment integrations, local storage, Firebase, CI/CD, full application architecture, and secure API handling and consumption. Reviewing code and taking project-level technical leadership responsibilities.

Professional Experience

Tecvison | Sweden

Software Engineer (Full-Stack) | Fully Remote | Jul 2025 - Present

- Shipped listing, ownership, and payment flow for Immovvel (property platform)
  And a corporate event booking product owning features from spec to production on a 30+ person remote team.
- Integrated Stripe and Paystack end-to-end: Checkout, payment intents, webhook signature verification, refunds, and failure handling with idempotent webhook processing so retired events never double-charge a customer.
- Fixed production bugs across web and mobile surfaces, including a webhook race condition where the success redirect reached the client before payment confirmation landed, leaving paid users stuck on a "pending" screen.

Ministry of Innovation, Science & Technology (MIST) | Lagos

Full-Stack Development | Hybrid | Feb 2025 - Aug 2025

- Built and deployed an attendance system for 150+ junior staff and graduate trainees, replacing manual sign-in sheets and cutting per-cycle reporting from hours to minutes.
- Built a Wi-Fi-based device tracker monitoring ~70 connected devices across the ministry network, reading DHCP leases and ARP tables to flag new and unauthorized devices.

Emperor Resources | Lagos, Nigeria

Frontend Developer | May 2024 - Dec 2024

- Built responsive Exchange interfaces for the FX platform, consuming the live market API (Aboki FX) and polling on fixed intervals with backoff and caching to stay under provider rate limits.
- Built a reusable component library adopted across 5 features, cutting UI build time for new features by roughly 25%.
- Handled state-rate and rate-limit failures so the interface degraded gracefully instead of showing outdated prices as live.

CoreCredit | Lagos, Nigeria

Frontend Developer (intern) | Jul 2023 - Feb 2024

- Built the credit tracking UI and an internal ops dashboard for loan officers monitoring active loans.
- Redesigned the loan application flow, reducing it from 8 steps to 5 and cutting drop-off at the document-upload stage.
- Integrated frontend features with backend APIs in live fintech product auth, form validation, and error states.

Selected Projects

Fresco - Produce Freshness Scanner GITHUB

FastAPI, Next.js, PostgreSQL, TensorFlow/Keras, MobileNetV2, TensorFlow.js.

- Trained a freshness classifier on 33,420 images across 44 produce types, hitting 89.3% accuracy.
- Cut interference from 30+ seconds to under 2 seconds by exporting the trained model to TensorFlow.js and running it in the browser, eliminating server cold starts entirely.
- The phone camera points at the produce and returns freshness, days remaining, and best storage. No download required.

Citer - Agentic Code Intelligence GITHUB

Python, LangGraph, FastAPI, Next.js, PostgreSQL/pgvector, Redis, GPT-4.0, Tree-Sitter, and Docker.

- Point it at any repo, ask a question in plain English, and get answers with exact file and line references.
- Parses every file at the function and class level with tree-sitter, then searches by meaning, keyword, and symbol name simultaneously so it catches code that keyword search misses and code that semantic search misranks.
- Answers only what it retrieves. Reports “not found” instead of guessing.

ContractGuard - Contract Review AI WEB | GITHUB

React, Node.js, PostgreSQL/pgvector, LangChain, Groq, Typescript, Firebase.

- It's a contract review tool that extracts key clauses, flags risky language, and answers questions with citations back to the source document.
- Cuts unsupported answers from 7% to under 2% by grounding every response in retrieved clause text and enforcing citation checks before returning an answer.
- Processes up to 20-page contract end to end in under 6 seconds.

Technical Skills

Languages: Python, TypeScript, Javascript, and SQL.
Frontend & Mobile: Next.js, React, Tailwind CSS,GSAP, Three.js, Responsive UI, and React Native.
Backend & AI Engineering: FastAPI, Node.js, REST APIs, RAG, AI Agents, LLM integration, and LangGraph.
Backend & Cloud: Firebase Authentication, Cloud Storage, Supabase, AWS Fundamentals.
Data & Storage: PostgreSQL, SQLite, Redis, pgvector, vector search, full-text search.
DevOps & Tools: Git, GitHub Actions, CI/CD, Crash Analytics, Performance Monitoring
Integrations: OpenAI API, Groq API, LLM, Payment APIs, QR Code Systems, Secure API Handling.

Education

Anchor University | Computer Science | 2022 - 2026
